

Teaching Evaluations Results

Victoria Barone*

Table 1: Summary Statistics - Teaching Evaluation Results

Semester	Section	Composite Median	Intellectual Challenge
Fall 2023	01	4.6	95%
Fall 2023	02	4.6	96%
Fall 2024	01	4.1	96%
Fall 2024	02	4.4	98%

Composite Median: this statistic is based only on the 10 standard items in the “Rate the named instructor...” section of the CIF. These are: overall organization of the course, availability of appropriate help or learning resources outside class, helpfulness of required assignments (reading, projects, etc.) in facilitating my learning, usefulness of the feedback I received concerning my work in the course, instructor’s preparation for each class, instructor’s clarity of communication, Instructor’s fairness and impartiality in conducting the class, instructor’s effort to help me develop mastery of the course material, instructor’s stimulation of my interest in the subject matter, overall promotion of my creative, analytical, or critical thinking. Each student’s responses to these 10 items are converted to numerical values (Excellent = 5, Very Good = 4, Good = 3, Satisfactory = 2, Poor = 1, Very Poor = 0, Not Applicable = excluded), and then averaged to create a composite score for that student. The Composite Median reported for the course is the median of these student-level composite scores.

Intellectual Challenge: this statistic reports the share of students answering “Extremely High” or “Somewhat High” to the degree of intellectual challenge they have experienced in the class.

Please comment on how well the activities, readings, lectures, and assignments helped you learn in this course.

Comments
Lectures were often difficult to follow and I had to spend significant time on my own reviewing the slides. Was not able to attend any of the offered office hours/collaboration session periods due to scheduling issues and that may have harmed my performance in this course.
The problem sets were perfect for understanding the material outside of class time and keeping us prepared for exams.
I believe that the problem sets did not help me prepare for exams.
The lectures and mock exams were good but the slides could have been more clear. The problem sets were helpful as well
The lectures of this course really helped me learn, and so did the problem sets. It helped break down hard materials into more easily understood parts.
The problem sets helped more than the lectures/slides
The lectures, practice problem sets, problem sets, and mock exams helped me learn and prepared me for the class' exams.
Problem sets and lectures were helpful for reinforcing skills/learning.
lectures were extremely important
This question is tough for me because I do not know if it is my fault that I did not learn as well as I wanted or the material's. This class needs to be hard, but at the same time, I feel like I am going to come away with much less from it than other Econ classes I have taken. I do believe I have learned a lot from the lectures and assignments, but I was not able to represent that on the exams, which has been very disappointing for me.
The lectures, problem sets, slides, and practice midterms were very helpful in both learning and preparing for assessments.
I like how the problem sets were spread out because they are hard and challenging so it was nice how we had time to work on those especially because they help prepare us for the exam
Lectures were helpful, ample practice opportunities as well
The problem sets felt like they were helping in learning the content of this course, but when the tests came it was clearly not the case. This is a hard question because I felt as if the problem sets did contribute greatly to the understanding of concepts, topics, and math of this course. However, these problem sets when studied did almost nothing to help studying for exams as the average on both exams was a 65 %. Maybe it was just the tests that were poorly designed to fit the course. For each test we were allowed a cheat sheet front and back. So for the first test we had 2 pages total and the second midterm we had 4 pages total. However, even with all this information available to us the class still could not do well. I am not worried about the grades because they will be curved to help everyone, but it still seems odd that no one in the class would be able to pass this class if there no curve.
There were not many readings outside of class, so the lectures were the main source of information. While the lectures covered a lot of material well, they often moved too fast and did not use enough examples to solidify my learning. The homeworks helped with applying my knowledge and actually understanding it, but the tests and homeworks would be easier if we did more examples similar to them in class so that I could have a gauge for what questions on each topic would look like.
Sometimes I thought the lectures could have more examples to help with the problem sets. Sometimes I did not know how to go

Comments
about starting certain questions. It would also be helpful to actually show the work for the solutions to the problem sets once the answer key is released.
The problem sets were helpful
The problem sets and slides were very thoroughly written out and did an amazing job of teaching the material.
The problem sets were lengthy and took quite a bit of time, but I was given a week to complete the assignment. The collaboration sessions as well as the numerous office hours available greatly helped. However, I sometimes felt as though I was confident and comfortable with the problem sets and mock exams, but was still very unprepared for the exam. I went into exams feeling confident due to the preparedness and amount of homework, but I came out feeling horrible about the exams.
The problem sets pushed me but they ended up being really helpful in mastering the course content
they help me a lot
The course is has a very good structure and has lots of interesting content. The professor is good especially with providing resources to do well in the course. For a class that is known to be very difficult it is easy to learn.
Lectures were not helpful at all and went very quickly. Professor has no idea the pace that her students need to absorb the information. Whenever someone asked her to slow down she ultimately spend up by the end of class. The problem sets were very hard, but were good for learning.
The lectures were really good at thoroughly introducing concepts on the assignments and exams, and I think that the assignment questions were thought provoking enough to really learn stuff and good practice for exams.
Professor Barone is a fantastic lecturer. She not only was very engaging but she also fostered a sense of "class pride" that I think everyone felt. Her lectures were very hard (not because of her teaching but because of the nature of the content) but I felt like every time I left the classroom, I understood what she had talked about and was confident I could replicate it in the problem sets and on the exams. I looked forward to micro lectures because Professor Barone was very well-organized and did a very good job of explaining complicated concepts without "overdoing things". The problem sets were difficult but fair and were very helpful in engraining the content and preparing for the exams.
The problem sets that were assigned were very similar to the exams and so were the practice exams. The lectures were helpful as well but were super fast, making them difficult to follow at times.
The problem sets and practice problem sets were incredibly helpful in preparing for exams and understanding the material. Professor Barone provided a wide range of practice materials that covered the full scope of the course.
Homework assignments were very helpful
No activities or readings'
Lectures were good, definitely helped my understanding, assignments were great practice and prepared for exam
They were very helpful. The homework was very similar to exams and the lectures were detailed.
The problem sets were challenging, but they helped me grasp what skills and topics I needed to master for the exams. The lectures were great, but I felt that there was a great disconnect between the academic difficulty of the lectures and the difficulty of the exams. I left every lecture feeling confident in the material, but upon studying for the exams, I felt completely unprepared (to an extent that is not expected or fair).
The homework was representative of what we learned in the lectures.
The only real assignments we had were problem sets most weeks. They were good in helping me practice the material we were learning in class, but often super challenging to the point where it was hard to learn because most of the time the problem set was the first time I was solving those types of problems on my own.

Please identify what you perceive to be the greatest strengths of this instructor's teaching.

Comments
Enthusiasm, engaging personality, always happy to entertain questions and provide additional examples.
The way she organized the class was perfect for an economics course.
Professor Barone has immense knowledge of the topics.
She is very good at providing us helpful resources and lecturing
Professor Barone does a great job of trying to engage her students in a topic that can be challenging and boring at times. She provides a lot of help to her students and engages the students to try to get the right answer. I really enjoyed how approachable she was on the topics and she definitely piqued my interest and helped me decide that I want to keep studying economics.
Availability
My instructor, despite being a very busy person, strives to make herself available as often as possible. She always shows up to

Comments
office hours ready to teach and answer questions. Not all professors go above and beyond like she does.
She had very organized classes
Frankly, she is incredibly intelligent and can represent that during lecture. I feel things are very straightforward during class, which is good for learning.
Dr. Barone is extremely organized, clear, enthusiastic, and efficient. Her lectures are concise and well paced (occasionally too fast), and her slides are the best I've seen for thoroughness and clarity. The practice problems in class are appropriately spaced throughout, and providing copious practice problems is helpful in preparing for the exams.
I think she is very sweet and really smart. She is definitely passionate about what she teaches and she cares about us doing well which is important because it is very hard material
She is so accessible, either help in the class or career in general
Slides were very well done, constantly available for office hours, made sure we all knew where there were opportunities for extra practice
Professor Barone's greatest strength is her understanding of the context. She clearly knows the material inside and out. This is helpful when asking questions as she truly knows everything about these topics.
Professor cared a lot about us practicing problems and having sufficient materials to prepare for homeworks and tests. She provided many sets of office hours and responded quickly to emails asking for help or clarification.
Very clear structure to the class
Detailed Lectures
She is extremely smart and knows how to teach the material well. She provides a lot of practice material which makes studying so much easier in her class.
Professor Barone was extremely personable and made herself available at many times throughout the semester, even when it was an inconvenience to her. She held a review session at 8am in the morning when students couldn't attend the evening session. Due to the difficulty of exams, some students would start to panic or cry during the tests. She came over to them to ensure they were okay and guided them through the stressful time. She also took interest in her students and wanted to know about their personal lives. She was relatable, and it made the class much more interesting, despite the level of difficulty.
Communication, simplification of complex ideas, maximising our potential and making us feel at ease and providing us with enough material to study adequately for exams.
she knows the concepts well
the structure of the course and interaction with students is very good.
She seems to be knowledgeable of the material.
Amount of practice available in the class
I think that whenever people asked questions, the answers were explained in great detail and very understandable.
Professor Barone is very good at being aware. She was very aware of how we, as students, were responding to her lectures and she would respond to how we were feeling so that we could learn best. She was also aware of the timeline of the course and she would make adjustments here and there so that we could not only get through all of the content but also get through it in a way that we could learn best. She was very engaging and responsive and it definitely benefitted everyone.
One of Professor Barone's greatest strengths was her knowledge of the subject. She knows a seemingly unlimited amount about Intermediate Microeconomics, which made her teaching interesting and extremely in-depth. Another one of her greatest strengths was her care for her students. Although we were often hammered with extremely difficult topics, she always tried to make sure we were all on the same page and often lessened the workload to help us out.
Professor Barone is a genuinely caring and professional instructor who prioritizes her students' success and creates a welcoming, supportive environment. She is always available to answer questions and provide guidance, making her students feel valued. Her motivation and charisma bring energy to the classroom.
Providing plenty of relevant practice materials
Good at explaining why things are the way they are, explaining the mechanics of certain problems and concepts
She explains concepts well and provides a lot of material to help.
You can tell that the professor is passionate about what she teaches. She is very knowledgeable of the material. Her lectures are engaging and easy to follow.
Providing resources (practice tests, office hours, review sessions) that are conducive to learning
Professor Barone's kindness was her greatest strength.
Professor Barone is very good at organizing the class and teaching efficiently. She is an engaging lecturer and I never really feel bored in the class.

Please identify areas where this instructor could improve his/her teaching.

Comments
Clarity in teaching complex concepts, applying the theory to the real world (examples were sometimes confusing or hard to relate to).
N/A
Classes were extremely fast-paced, and reviews were impossible to follow.
The slides were a little vague and unhelpful for the exams at times. Also, I wish we had enough time to effectively finish the exams
Professor Barone is an awesome teacher, the only thing she could do is provide more review lectures or videos instead of going back over questions. But that was just a minor point.
She speaks super fast during lectures and the slides don't always get the point across
More clarity at the beginning of the semester on what concepts we will be learning.
sometimes was hard to understand in class which made learning harder
With courses like this that I have taken in the past, problem sets, lectures, and notes have all helped me get a good understanding of what I need to do for the exam. The difference is I will take practice exams and do problem sets over again and still do poorly on the exam. I guess what I am saying here is I don't think there is anything wrong with her teaching. I just believe there is a disconnect between her teaching and the exams.
I think Dr. Barone is doing a great job. One thing I would like in the future relates to exam curve scoring. Dr. Barone gave us our raw scores and then a placeholder score to anticipate where we will be in the final grading after curving. I would have preferred to see our raw score and then a curved score such that we are more easily able to see where we are. For example, if I earned an 85% on the exam, then I would prefer to see the 85% on the paper exam. If the class did poorly and the test is curved up by 8 points, then the score entered into Canvas would be a 93% and I would have a clearer picture as to where my grade was relative to the 95%, 93%, etc. grading cutoffs. Additionally, I think Dr. Barone could emphasize that we need to be more time conscious in the exams — the time crunch in midterm 1 came as a surprise.
Goes too fast through the slides, do not have enough time to fully understand material. Find myself teaching most of the material even after going to class.
I think just talk slower or like, go at a slower pace because sometimes it was hard to keep up. Also, maybe just "dumbing" some stuff down. what I mean by that is , I felt like some things were way more complicated than it needed to be
More detailed answer key, for the practice midterms she only said what is the correct answer, i think it would be easy to understand if she explained how to get to that result
I thought she overall did a good job
I think Professor Barone's expectations of the class was too high. The tests show this. I think Barone's test writing skills need to be improved so that exams match what we have done in the homeworks and practice exams better.
The tests were unnecessarily hard and fast paced, given that we did not do enough similar examples of the problems during class. I do not understand making tests in which the average grade is a D because it is demoralizing and not a true test of knowledge, only of speed in answering questions.
Show the work for answer keys and not just the solutions
Slow down slightly when delivering lectures—hard to keep up with notetaking
Nothing comes to mind.
Professor Barone could help better prepare students for the midterms. She provided plenty of notes and mock midterms, but these did not reflect the difficulty of the exams. I felt as though there were curveballs thrown that I was extremely unprepared for despite the amount of studying that I did beforehand. I also feel as though she flew through the notes and examples in class, and she was finished before my brain could even comprehend the first step. She is able to do the problems extremely quickly because she is familiar with the information, but for someone who is brand new to the subject, it would be beneficial for her to slow down.
N/A. Professor Barone is amazing and super cool. I hope to take more classes with her in the future
She is going too fast in the lectures and it is hard to follow her. The way she teaches the class makes it hard for me to understand the concepts
I wish for the course was slower because it goes very fast and it is tough to understand the content as it is happening.
Slow down during lectures, do more examples during class, more class participation, and more transparency on exams.
The math operations could be a litter cleaner on the exams given the time constraint
Overall, I think that some things were not emphasized enough in class lectures for the amount of assignments and exam material that covered those topics.
Slideshows were sometimes hard to understand and incomplete in detail. Organization and clarity of methods/processes in slides

Comments
might be beneficial for students learning material for the first time.
Professor Barone gave us a tremendous amount of resources on Canvas. I would say she can maybe organize the resources a little bit better (for instance, make separate folders for the "completed" lecture notes and the "to fill out" lecture notes).
Professor Barone could improve her teaching by slowing down the pace of the course, both in terms of the concepts we learned and the actual pace at which she teaches. We covered so much ground throughout the semester that it made it extremely difficult to feel like I had mastered all of the material regardless of the amount of time I put in. The lectures were, therefore, extremely fast as well, and without a recap at the end, I found myself often forgetting some of the things that I had learned at the beginning of class, which came back to bite me on both of the midterm exams.
N/A, excellent professor.
She sometimes focuses too much on theory rather than solving problems; the questions asked in problem sets/exams are not the same as the content she teaches in class.
Lecture clarity
Writes an incredibly difficult exam, which ends up being more difficult due to time pressure than actual class difficulty
Shorten the midterms.
Clarification and out of class communication. By this, I mean that everything discussed in class makes sense, but everything assigned and communicated outside of class is vague or hard to decipher. I was never confident about what I needed to know for exams or what to expect in homework. This made my time in the class too stressful.
Speed during lecture? But there is a lot of content to go through so I get it!
Professor Barone could slow down in her lectures in order to give students time to process the information.
I think the teaching is often too fast. I always struggle to even write down everything she talks about. I feel like every class I am furiously writing that I can't even really grasp the information. I understand that is why the slides are provided on canvas, but I feel that if I just use the slides as my notes then it's hard to truly understand the concepts without writing them out myself.

Comments
Outside class work was always extremely beneficial to my understanding of the course material.
Very well. The practice problems were invaluable
I thought that the problem sets that we needed to complete for homework were incredibly helpful because they closely mimicked questions that would then be on our exams.
The lectures didn't really apply to the homework, I wish there were more in class examples.
None of the problem sets were nearly as hard as the exam was, and they still took me a long time. Exams were ridiculously hard especially compared to the materials to prepare for them. The slides and lectures were very unclear and they did not help. Any meaningful things I learned I learned myself with other University's public material.
I think the problem sets were good at teaching the material. However, I think the lectures could be more clear and organized as to what the important points are to succeed on the exam. I believe there was material on the exam that was not sufficiently taught to the students and did not prepare them correctly for the exam.
Professor Barone offered us many practice exams and problem sets outside of the regularly scheduled problem sets. This allowed me to further study any topics I had difficulty with.
While the content is extremely difficult, the amount of resources provided does significantly help my learning. Although sometimes the slides may be disorganized, they clearly convey the most important material, and the problem sets adequately prepare me on a weekly basis. The mock exams and extra practice are also great tools for studying.
Prof. Barone provided extensive resources for us to study and practice for our exams, which was helpful.
The lectures were very helpful in explaining the concepts in the course, and while challenging, the problem sets and collaboration sessions were helpful in test preparation. The tests were exceedingly difficult and near impossible to complete in the time allotted, so a shortened exam would also help me to better demonstrate my learning and find success.
This was a really challenging class. I had trouble following along in lectures. Problem sets were moderately helpful in helping me understand and master concepts, but tests were so difficult even when I felt like I knew the material and spent hours studying.
The work for this course has been extremely challenging. The lectures that we are given in class are helpful and I appreciate that they are all uploaded to canvas, but often times they are not complete with information, especially all the steps to the math, which is really frustrating when the slides should be the one place where there are no steps skipped. There is also this problem with the problem sets, the amount of work provided on the answer key is NOT ENOUGH for me to understand the answers. Oftentimes the multiple choice just list the correct answer with zero further information given about why it is correct, and the open response answers skip over an insane amount of steps to the point where it is impossible to comprehend. I understand skipping math steps in a review session or if we need to move quickly through the lecture, but it is not okay to leave out this much information on the slides and problem sets.
Besides the answer keys the problem sets are helpful for understanding the concepts we learned in class, and I appreciate that there are collaboration sessions to work on it with our peers the day before its due. The office hours with the professor were helpful,

Comments
but the office hours with the TA's were much less helpful, as they would often just say that "they learned how to do it a different way" when they took the class and just give us the answer instead of actually helping us understand it.
I also think that the difficulty of the exams was way too extreme for the amount of teaching we were getting in lecture. If the average of BOTH of the midterms for the classes is a 65, that means that there has to be something wrong with the exam. Watching us do so poorly on the exam to then turn around and say that "we're doing fine" or we should just do better on the next one is NOT a helpful way to respond to the fact that the class is clearly struggling. If I'm learning anything, I definitely don't feel like I am, and my grade most certainly does not reflect that, despite what the professor says.
Homework was great practice and preparation for exams, lectures were a bit slow at times and fast at others, would have enjoyed to have readings to build conceptual mastery and understand theory on deeper level.
Problem sets helped me understand.
The lectures were not helpful. The slides were moderately helpful but weren't organized well. The mock exams were very generous and very helpful for preparation and learning.
While Professor Barone emphasized that she had a right to ask us challenging questions on the exam that we haven't exactly seen before to test our knowledge I felt given the difficulty of the course already and how very little time we have on the exams it was extremely difficult to prepare. I felt that even if I studied everything there was still a few questions i just couldn't do.
Homeworks were often overly difficult and required at least 5 hours of confusing work. Spent considerably more time than what was needed to understand the material. Lectures were frequently too fast paced and very confusing. Instructor was hard to understand and went very fast, sometimes skipping important steps. Exams were too long and I never had time to finish. Additionally, they were very difficult.
Her lectures were organized and thorough, but she focused moreso on the theories and did not include practice problems enough. The class was often lost as she conceptually explained things on the blackboard, especially since she moves quickly and makes jumps in her discussion logic. From discussing with other peers and comparing this professor with the more experienced professor, I learned that Professor Barone's lectures are harder to follow and she doesn't make the material digestible enough. For example, there is an easy short cut to figuring out the Marshallian demands for a Cobb–Douglas equation, but I only learned the shortcut from the Econ Help Room tutoring.
I think the workload was manageable and was always relevant to what we were learning.
Lectures were packed with information that was hard to follow and often read on the board. Office hours were essential in order to just have a basic understanding. There was a large gap between what was taught in class and what was assessed on homework and exams.
The lectures are really fast paced, I wish there was more reference to the textbook or videos with solutions to watch after class. Sometimes the multiple choice answer sheets don't have the procedure. The assignments are really useful though.
The lectures in this course were pretty helpful, and I think we got a lot of good examples to prepare us for examinations. They did move very fast, which, if you were taking notes by hand, was slightly difficult to follow, but it helped that the slides were posted after the fact.
Homeworks similar to exams
had to use slides and self-study to do most of my learning; attending lectures did not help my comprehension
Homework was helpful in understand the material, collaboration sessions were a large part of this
I appreciate the fact that we have access to both completed and uncompleted lectures to aid in our understanding in class but outside of class as well. Assignments are challenging and adequately test our knowledge on the subjects whilst fostering a sense of learning. Materials on the homework closely match what we'd see in terms of both format and difficulty, which is also greatly beneficial.
There were excessive examples that she gave us! They were the same level of difficulty as the class examples.
The assignments helped me very much, however the lectures where very ineffective and left me really confused.
eh
Lectures and problem sets were helpful to my learning in this class. I found that I learned a lot from Youtube as well. The mock exams before the exams are what helped me succeed in this class the most. The problem set collab sessions with other classmates were nice to bounce off ideas and way to look at a question.
The lectures and homework did almost nothing to help me learn in this course. Lectures were impossible to follow as she ran through them at an extremely fast pace and rarely stopped to ask if anyone needed clarification. Furthermore, her accent made it impossible to understand many words she said, about halfway through the class me and many other of my classmates realized going to lecture was not benefitting us in any way and so instead we were forced to teach the material to ourselves and rely on the TAs.
Professor Barone provides a surplus of practice material designed to help us achieve mastery in our understanding of class concepts. The content itself is extremely difficult resulting in relatively low test scores across the board, but I believe this is more of a

Comments
result of the level of difficulty of microeconomic theory then a flaw in teaching or a lack of study material.
Lectures were engaging and the assignments were challenging

Please identify what you perceive to be the greatest strengths of this instructor's teaching.

Comments
– The amount of content she gives us to study. Never had a professor give so much
Prof. Barone is very passionate about the subject matter and is a very talented lecturer and teacher. She makes an effort to build relationships with students and be relatable, which helps to break down barriers and improve my work in class.
Professor Barone is helpful in office hours. She is a clear communicator about course logistics.
I think that Professor Barone understands the material we are learning very well, so she never has a problem answering any of the questions that we ask in lecture. She also posts an immense amount of review material before exams which is very helpful for studying.
Explanation of topics in several ways, allowed for different individuals to play to their strengths.
Being a fair grader and understanding the difficulty of the class.
The professor obviously put a ton of effort into the class and tried her hardest to get us to understand the material. She was open to talking after class and was generous with grading and the abundance of material given out.
Professor Barone is very open to questions and is very good at giving us ample practice material.
Is very smart and knows material very well.
–Office Hours: During office hours, Professor Barone is accessibility and helpful. She treats every question with respect ("no question is a bad question") and goes at a better pace than during the class discussions. She balances helping the room and individuals well during office hours and her material makes more sense during office hours.
–Pre–exam material reflects the exams well: She makes it clear how helpful the mock exams and problem sets will be for the exam, so it is easy to understand how to do well during the exam.
–Flexibility: Professor Barone is good at adjusting to the classes' feedback. For example, she adjusted the problem set deadline around the holidays, added additional office hours before exams, and is generally good at asking for feedback.
She is mindful, engaging, energetic, and takes genuine care in her students.
Professor Barone is clearly passionate about the subject.
Professor Barone knows that this class is difficult, and in turn does a great job in giving the class plenty of resources outside of class to help us better understand the material. She also gave a lot of help with exam preparation, and delivered on the fact that we could hypothetically do hours of microeconomics every day in order to master the subject.
Intellectually stimulating course
providing practice material and clarity in grading/exams
Clearly loves the material and loves teaching, very organized, has comprehensive slides
Great lecturer who really cares about students' learning and well-being.
Professor Barone is extremely passionate for not only economics but teaching as well. Her resources are top notch, I have yet to see a professor at Notre Dame who is so willing to give us a large question bank in terms of problem sets, practice problem sets, practice midterms/finals, and mock midterms/finals. This greatly helps students prepare for exams. She is also seems very passionate in helping us succeed. She seems to have no intention to mean no harm to students and does her best to make sure our grades reflect our performance and effort.
Professor Barone is super sweet and I really like her. I also like the way she teaches the class and really values our feedback.
Available, wants you to succeed, and gives many resources to practice.
N/a
Professor Barone was super prepared for the lectures with slides. I liked how the slides had a lot of content and information, so we can reference them outside of class.
Being passionate about learning the material and motivating us.
NONE.
Professor Barone is an incredible professor who truly cares about her students and wants them to do well in her class. She always makes sure that there are plenty of opportunities to get help outside of class, and goes above and beyond in providing study material for tests. Professor Barone has a big heart and it shows in the way she teaches her class. Although this class has been somewhat of a struggle for me, I cannot fault Professor Barone or her teaching style in any way.
Putting together lots of relevant practice material that we can use to study as well as talk about in class

Comments
This professor provided a variety of resources outside of the classroom. The lectures and overall course was extremely structured.
Creation of new practice problems for us and a help sheet for tests
I believe Professor Barone does a great job of connecting with her students and keeping the lectures engaging. Economics does not always cover the most fascinating, however, I never found myself bored in this class. Professor Barone also always supplied ample practice problems prior to an exam which was incredibly helpful when it came time to study for that exam.
She gives tons of help and is very accessible outside of class.
She is very nice and she does care about her students.
I think her biggest attribute is her engaging personality that keeps the class light when the material becomes complicated.
Professor Barone works very hard to ensure we have as much material as we need to practice and master the material.
Victoria is one of the most genuine professors I have ever had. She genuinely wants her students to succeed, and she supports us in every capacity. Her grading is designed to help us and her instruction is especially clear. She is the sweetest and always does her absolute best to help us grow in our learning.
Throughout the course, she was always kind and student-driven. She was so helpful, providing slides for us to take notes and resources to study from and practice with.

Please identify areas where this instructor could improve his/her teaching.

Comments
– Sometimes I get very lost during class because its so fast paced and complex. I understand this also has to do with the content, but I can barely keep up with the classes
Prof. Barone's tests were too long, bordering on impossible to complete well in the allotted time, and a shorter exam would have helped me to better check my work and improve my grades.
Lectures were hard to follow. I wish that she had used examples with simpler algebra when she was first introducing topics. Exams were also extremely difficult and I wish that there were sort of levels of difficulty in the practice exams that were more clear.
Professor Barone often runs through the information in the slides very quickly, especially when going over the math steps. I understand that there is limited time in lecture, but the writing on the board is so small and so many of the steps are skipped that it is often very hard to follow what she is doing. She often has an attitude like she doesn't really want to be in the class or that the questions that we ask are not smart, I understand she teaches two lectures back to back so she may be less enthused about teaching it for the second time but it does not make for a great learning environment.
For practice exams, I would prefer more quality than quantity. For example, give 1–2 practice exams that have fully detailed solutions and how to complete each problem rather than 5 practice exams that do not have explanations.
Clarity of communication and organization of the course.
I learned none of the material from the lectures. I either learned it on the slides or figured out how to do the problems from the answers to the mock exams and problem sets. I would encourage the professor to restructure how she teaches the material in the lectures. She sped through the material and while she often stopped and encouraged us to ask questions I was often so lost I didn't know what to ask.
On Midterm two several of the multiple choice questions were conceptual. Despite being rather confident heading into the second exam I was completely thrown off. I realized I had zero conceptual understanding of the material. I am able to take partial derivatives, identify problems and figure out how to work through them merely by copying the professor's work.
Going a little slower. Putting less questions on the exams (I felt on some exams that I could've done better if I just had more time)
Quite hard to understand most of the time. Talks extremely fast and moves through material very quickly. Despite being very knowledgeable, sometimes struggles to communicate her knowledge with class. Was often very confused during lectures and when doing problem sets and left every interaction with the class feeling frustrated.
–During her lectures, I was often confused or got lost because she discussed things in terms of theories too often. It could be beneficial to provide pre-class videos and incorporate some components of a flipped classroom so we could work more problems in class. I cannot emphasize how much I think this would help. Maybe a weekly video to prepare and then a short, easy video quiz to keep people accountable to watching the material. Then, we could "fix ideas" during class through a more balanced combo of lecturing and working problems.
A little more time on review at the start of the class as I don't feel like calc two did a great job of preparing me.
More effort needs to be given in preparing students for what they will be assessed on. It was entirely on students to figure out concepts for homework and exams but there was no textbook or other resources to look to aside from the professor.
It would be a lot more useful to have the class be a little slower paced. Have video solutions walking through exercises posted on canvas. Sometimes she brushes through a subject or solution because she assumes we already understand it or that it is easy to

Comments
figure out but that does not apply for everyone, so in a way this is a class that requires a subject to be "dumbed down" a lot to ensure proper instruction. It is easy to assume people will understand something. The class in itself is hard to understand and hard to teach, so I would appreciate just extra clarification.
Professor Barone does move through the lectures very fast, to the point where it is hard to follow. Additionally, practice materials such as practice exams and problem sets didn't have worked out solutions on the answer keys, which left me rather clueless when it came to studying for the exams, in some cases, because I had no idea where to go after I got a question wrong. On Exam 2, one of the questions was incorrectly graded, meaning that I lost 2 points that I shouldn't have, but instead of the exams being regraded, the whole class just got a blanket 1.5 points back, which is completely unfair, because kids who got the question wrong got 3.5 points extra, while kids who got the question correct lost .5 points, which, in a class that is curved, is very frustrating.
Less questions on exams as the majority of people run out of time
The course is difficult by nature and needs to move quickly, but often when learning something new I would not have time to fully comprehend it before the slide is changed
The tests are a little bit too difficult for my liking.
Professor Barone is generally a great professor. One area of improvement that I could perhaps suggest is explanations in regards to problems that she's solving in class. Sometimes these explanations can be a bit fast to understand for the first time. Admittedly, because the course is so dense with content, I can understand her limitations with time but I think there is some benefit to be seen if she is better able to target the core reasoning behind why we would do A over B when approaching a problem.
In the beginning, it was hard because she relied heavily on the slides, and for a math-heavy course, it was not helpful. Luckily, I think she saw us struggling and towards the end of the class she started to actually walk us through the examples.
Not a very good lecturer, slides are not clear, and exams are harder than the practice as well as very confusing.
Cannot understand her
Do more example problems in class along with going over the slides. Maybe have in class exercise sheets? My accounting class does this, which is extremely helpful since its a low stacks, no pressure environment to make mistakes and ask questions. The problem sets are graded so it's different.
Slow the lectures down a bit and do more practice problems in class
Slowing sdown in lectures when it is obvious the entire class is behind and does not follow what she is saying. Also, her accent made understanding her even harder so that, combined with her speed of talking, overall should be improved so that we as students can attempt to understand her.
If there was a way for Professor Barone to improve her teaching style, I would have to say it would be in terms of in-class practice activities. While these activities exist, often they are hard to follow and her handwriting and problem-solving process can be difficult to follow at times. I wish she posted the answers to the in-class activities to the canvas page in addition to the empty slides.
I have no complaints
The exams were extremely difficult, often testing questions we had not previously been exposed to in any of the course material.
Less practice sets
During the lecture, Professor Barone will occasionally solve the practice problems from her powerpoint on the chalkboard, but the solutions to the questions posed in the powerpoint are then not included in the powerpoint. This was sometimes difficult when going back and studying old material.
Her exams are completely different from practice exams, so it made it hard to prepare for them.
Her lectures did not help and did not properly explain the material. The math was too difficult having only taken Calc I and II. It often felt like she did not know that we had not taken calc III. The problem sets were difficult, but did not prepare me at all for the exams and clearly the same is true for everyone else since the averages were in the D range which is way lower than any other professor who teaches this class. I studied for hours each day for two weeks leading up to the exams and still did not do well. The exams were too long and were much longer than the practice ones.
I think she can improve in making the class more organized and clear in what the students are expected to know for the exams.
Sometimes the difficulty of the problem sets and practice exams does not exactly match the difficulty of the exam.
Sometimes she moves a little fast in lectures, so maybe if she slowed down the course a little bit I could learn better. However, she always takes the time to answer our questions.
